GEZE Perlan 140 on wooden door (Photo: GEZE GmbH)

INTRODUCTION

Sleek technology - highly durable

Sliding fitting systems consist of a track and the roller carriage guided within it; the roller carriage moves the leaf connected to it – made of glass, wood and/or metal – or any other elements. The roller-guided sliding fittings of the Rollan and Perlan range are preferably used for indoor doors. Their particular advantages include their very quiet running and sophisticated design. A comprehensive range of accessories provides solutions for virtually every use. Glass solutions can be implemented, among other things, using the Levolan, Aerolan, Geolan and Vetroslide design fittings.

Sliding fitting systems for manual wooden and metal doors

GEZE offers all kinds of different fittings solutions for functional and visually attractive sliding door systems, partitions or other moving elements with wooden or metal leaves. These enable considerable design freedom and planning and design flexibility. Sophisticated technologies, high-quality materials and first-class workmanship move the roller carriages precisely, gently and quietly along the track and make the fittings system very strong and durable.

Glass solutions for manual sliding door systems

In modern architecture – for example, in office buildings, but in private housing too – conventional materials are nowadays often replaced by glass. Glass is incorporated as a design element under new prerequisites, functional and technological aspects become increasingly important and fittings are deliberately accentuated, for example, as high-quality design versions, so that the glass/fitting technology mix requires wide variety. GEZE provides diverse visually outstanding and efficient concepts for a fluid, open and transparent ambience.

GEZE ROLLAN 40 N / ROLLAN 80

GEZE Rollan 40 N / Rollan 80

The quiet roller-guided sliding systems for simple sliding concepts

The quiet GEZE Rollan 40 N and Rollan 80 roller-guided sliding fitting systems enable uncomplicated integration of sliding concepts in indoor spaces. The ceiling and wall fixing supports diverse use, including in passage doors, partition walls and cloakrooms. The level contact surface of the track reduces the noise generated on opening and closing. The track can be uniformly used for Rollan 40 N and Rollan 80 and for any leaf material. This reduces planning and storage costs and therefore enables simple adjustment to changing use circumstances. Equally, the closed version of the track prevents the penetration of dust and dirt. The distance between the door leaf and the track can be easily set or readjusted using the suspension bolt, even when installed.

The complete sets consist of the track with differing length, 2 roller carriages, 2 carrier plates, 2 tube buffers and 1 floor guide. A hold-open spring is also included in the Rollan 80 set.

Alternatively, the track (6 m long or customized length) and the accessories can be ordered separately.

GEZE Rollan 40 N / Rollan 80

GEZE Rollan 40 N / Rollan 80

Application range

- For wood, metal and glass doors
- A glass clamping plate is available for glass leaves
- For all single- and multiple-leaf sliding doors
- Quiet running makes it particularly well suited for doors in living and office spaces

GEZE Rollan (Photo: GEZE GmbH)

GEZE Rollan 40 N SoftStop

Gentle closing with anti-trap protection

GEZE sliding fitting systems with Rollan 40 N SoftStop draw-in damping perfectly combine comfort, convenience and safety for sliding doors. Uncontrolled stopping at the frame or the buffer is now a thing of the past. The door is braked gently and automatically returns to the zero position. The gentle draw-in to the end position is easy on the door and the fitting and increases the door's life.

With a total height of only 29 mm, Rollan 40 N SoftStop is completely concealed in the track. The draw-in damping also acts as anti-trapment device, as the door's movement is braked over the last centimetres of closing. The GEZE Rollan 40 N SoftStop draw-in damping is available as a standard feature for leaf widths between 545-1700 mm.

The set contains a Rollan 40 N SoftStop roller carriage for one or double-sided damping. The standard set also includes 1 or 2 carrier hooks including fixing screws, 2 x track buffers, 2 x suspension bolts as well as 2 x carrier plates.

GEZE Rollan 40 N SoftStop

GEZE Rollan 40 N SoftStop

Application range

- For wood, plastic, glass and metal leaves up to 40 kg leaf weight
- A glass clamping plate is available for glass leaves
- For all single- and multiple-leaf sliding doors
- Damped on one or both sides
- Particularly well suited for doors in living and office spaces

GEZE Rollan 40 N SoftStop - Order information

Description	Leaf width from - to	ID.No.
Rollan 40 N SoftStop set, medium version, damped on both sides, up to 40 kg The set includes: 1 x roller carriage with damping unit on both sides, 2 x buffers, 2 x drivers with attachment screws, 2 x standard carrier plates	880 mm 1270 mm	129902
Rollan 40 N SoftStop set, short version, damped on one side, up to 40 kg The set includes: 1 x roller carriage with damping unit on one side, 2 x buffers, 1 x driver with attachment screw, 2 x standard carrier plates	555 mm 880 mm	129899
Rollan 40 N SoftStop set, medium version, damped on one side, up to 40 kg The set includes: 1 x roller carriage with damping unit on one side, 2 x buffers, 1 x driver with attachment screw, 2 x standard carrier plates	880 mm 1270 mm	129900

GEZE glass clamping plate 45 mm

Inconspicuous and easy to install

The GEZE glass clamping plate offers increased mounting convenience without the need for time-consuming glass work. The individual clamping plates can be covered or both patches can be concealed with a continuous cover. By completely covering the carrier plates, the visual effect is that of a continuous clamping plate, which is also available in all RAL colours. The gap between the clamping plate and track is hardly visible and there is no need to fit a cover on site. The glass clamping plate can be used for all standard glass thicknesses. The clamping plate can be set to the respective glass thickness using the inside gearing. This considerably facilitates installation and dismantling.

GEZE glass clamping plate 45 mm

GEZE glass clamping plate 45 mm

- 1 = Cover profile
- 2 = Inside gearing
- 3 = End cover
- 4 = Glass clamping plate

Glass/metal bonding set 50 g for up to 30 doors			133039

GEZE GLASS CLAMPING PLATE

GEZE glass clamping plate 30 mm

Inconspicuous and easy to install

The small glass clamping plate enables minimum installation height for maximum use options. Doors up to 80 kg are securely clamped without glass preparation or gluing. Due to an overall height of only 30 millimetres, the glass clamping plate is not visible when installed in a standard wall recess. Its length of only 110 mm enables diverse use for almost all door widths. It can be used in conjunction with GEZE's manual sliding systems Rollan 40N/80 and Perlan SoftStop, and with Perlan AUT/Perlan AUT-NT. The glass clamping plate for Perlan AUT/Perlan AUT-NT fits concealed under the clip-on cover 100. The result is a complete system for automated glass doors. The simple installation using clamping plates makes all glass preparation work superfluous. All the usual types of glass can be covered (Toughened safety glass (ESG) 8, 10, 12 millimetres and laminated safety glass (LSG) up to 12.76 millimetres with an additional LSG kit). Individual design options due to the possibility of covering each of the individual panels, or continuous covering across both panels.

GEZE glass clamping plate 30 mm

Application range

- For all GEZE sliding systems
- For ESG (toughened safety glass) 8, 10, 12 mm as well as laminated safety glass up to 12.76 mm with additional laminated safety glass adhesive kit (without glass preparation) and wooden leaf
- For leaf weights up to 80 kg

Glass/metal bonding set 50 g for up to 30 doors			133039

GEZE Perlan 140

A wide range of applications with individual accessories

The unobtrusive design supports any desired effect and turns the sliding system with its wide range of accessories into a guarantee for elegant and customised solutions. Even heavy doors are child's play to open. The Perlan 140 provides long-term quiet running due to two precision ball bearings per roller carriage, track design and large carrier rollers. The interior, sealed ball bearings provide corrosion protection for slightly humid interiors, making them suitable even for bathroom doors. The track in anodised alloy material reduces abrasion and also provides increased corrosion protection. The profile has no awkward edges, and all the accessory parts run in the track making Perlan 140 just perfect for installation in visible areas. The distance between the leaf and the wall can be adjusted using the wall attachment bracket, which permits the door to be adjusted to individual situations, e.g. for precise installation of the track where masonry is uneven.

There are numerous complete sets available for a wide range of different applications. These always include all the parts necessary for setting up the sliding door: tracks in different lengths as well as matching fixing brackets e.g. for wall installation, roller carriages, carrier plates, tube buffers and floor guide. Alternatively, the track (length 6 m or cut to size) and the accessories can be ordered separately. The track is also available in a curved version on request.

GEZE Perlan 140

GEZE Perlan 140

Application range

- For wood, plastic, glass and metal leaves up to 140 kg leaf weight
- Diverse additional parts are available for glass doors, e.g. glass clamping plate, fixed panel holders or GGS holders
- For all single, multi-leaf and synchronous sliding doors
- Straightforward, direct ceiling mounting or mounting using brackets on wall and ceiling
- The smooth running and use of high-quality materials as well as the quality workmanship make it especially suitable for doors in highly frequented residential and office areas

GEZE Perlan 140 (Photo: Dirk Wilhelmy)

GEZE Perlan 140 accessories

Glass floor guide with variable adjustment

The floor guide is suitable for glass thicknesses between 8 mm and 12 mm and can be simply and precisely infinitely adjusted.

Adjustable hold-open device

A headless screw is used for individual catch force setting of the hold-open device. This means individual adaptation to the door leaf used (depending on door weight) and respective door user is possible.

End cap

The push-on end cap gives the track a clean end.

Concealed carrier plate

The distance between the rail and the door leaf is minimised by the suspension being concealed in the wooden leaf. Visible carrier plates are a thing of the past, and on-site wooden cover panels are no longer required.

Stainless steel floor guide version

Adjustable glass floor guide EV1

Adjustable hold-open device

End cap

Ceiling compensation set/ceiling spacer, stepless

GEZE GLASS CLAMPING PLATE

GEZE glass clamping plate 45 mm

Inconspicuous and easy to install

The GEZE glass clamping plate offers increased mounting convenience without the need for time-consuming glass work. The individual clamping plates can be covered or both patches can be concealed with a continuous cover. By completely covering the carrier plates, the visual effect is that of a continuous clamping plate, which is also available in all RAL colours. The gap between the clamping plate and track is hardly visible and there is no need to fit a cover on site. The glass clamping plate can be used for all standard glass thicknesses. The clamping plate can be set to the respective glass thickness using the inside gearing. This facilitates installation and dismantling considerably.

GEZE glass clamping plate 45 mm

GEZE glass clamping plate 45 mm

- 1 = Cover profile
- 2 = Inside gearing
- 3 = End cover
- 4 = Glass clamping plate
- 5 = Glass pane

Application range

- For all GEZE sliding systems
- For ESG (toughened safety glass) 8, 10, 12 mm as well as laminated safety glass up to 12.76 mm with additional laminated safety glass adhesive kit (without glass preparation) and wooden leaf
- For leaf weights up to 140 kg (Rollan up to 80 kg)

Standard installation of Perlan 140 on glass leaves

Drawing No. 10421-ep07

Note

The wall recesses must be made accessible by a removable cover. The door leaf must be stopped by a further angle buffer – in addition to the tube buffer. The buffer must be attached at the mid door height!

Mounting on a 1-leaf sliding door with glass leaf and carrier plate (manual):

- 1 = End cap (optional)
- 2 = Wall attachment bracket Perlan 140
- 3 = Tube buffer
- 4 = Hold-open spring
- 5 = Double roller carriage
- 6 = Clamping plate
- 7 = Adjustable floor guide
- L = Track length
- y = Distance end of track to centre of first drilled hole
- FB = Leaf width
- FH = Leaf height
- n = Quantity
- t = Hole spacing

Can be fixed directly or with a plate on the ceiling or a bracket on the wall:

Direct ceiling mounting
SH = Panel height
GH = Total height

Wall mounting with angle
SH = Panel height
GH = Total height

Ceiling installation with plate
SH = Panel height
GH = Total height
1 = Ceiling attachment angle Perlan 140
2 = Thickness of glass

Glass/metal bonding set 5x1 g for up to 5 doors			133056
Glass/metal bonding set 50 g for up to 30 doors			133039

GEZE glass clamping plate 30 mm

Inconspicuous and easy to install

The small glass clamping plate enables minimum installation height for maximum use options. Doors up to 80 kg are securely clamped without glass preparation or gluing. Due to an overall height of only 30 millimetres, the glass clamping plate is not visible when installed in a standard wall recess. Its length of only 110 mm enables diverse use for almost all door widths. It can be used in conjunction with the GEZE's manual sliding systems Rollan 40N/80 and Perlan SoftStop, and with Perlan AUT/Perlan AUT-NT. The glass clamping plate for Perlan AUT/Perlan AUT-NT fits concealed under the clip-on cover 100. The result is a complete system for automated glass doors. The simple installation using clamping plates makes all glass preparation work superfluous. All the usual types of glass can be covered (ESG 8, 10, 12 millimetres and LSG up to 12.76 millimetres with an additional LSG kit). Individual design options due to the possibility of covering each of the individual panels, or continuous covering across both panels.

GEZE glass clamping plate 30 mm

Application range

- For all GEZE sliding systems
- For ESG (toughened safety glass) 8, 10, 12 mm as well as laminated safety glass up to 12.76 mm with additional laminated safety glass adhesive kit (without glass preparation) and wooden leaf
- For leaf weights up to 80 kg

GEZE Perlan 140 SoftStop

Gentle closing with protection against entrapment

GEZE sliding systems with Perlan 140 SoftStop draw-in damping perfectly combine comfort, convenience and safety for sliding doors. Uncontrolled stopping at the frame or the buffer is now a thing of the past. The door is braked gently and automatically returns to the zero position. The gentle draw-in to the end position is easy on the door and the fitting and increases the door's life. With a total height of only 40 mm, Perlan 140 SoftStop is completely concealed in the track. The draw-in damping also acts as entrapment protection, as the door's movement is braked over the last centimetres of closing. GEZE Perlan 140 SoftStop is available as a standard for leaf widths between 515-1700 mm and leaf weights up to 80 kg.

The set contains a Perlan 140 SoftStop roller carriage for one or double-sided damping. The standard set also includes 1 or 2 carrier hooks including fixing screws, 2 track buffers, 2 suspension bolts as well as 2 carrier plates.

GEZE Perlan 140 SoftStop

GEZE Perlan 140 SoftStop

Application range

- For wood, plastic, glass and metal leaves up to 80 kg leaf weight
- A glass clamping plate is available for glass leaves
- For all single- and multiple-leaf sliding doors
- Particularly well suited for doors in living and office spaces

GEZE Perlan 140 GGS

The elegant design fitting for all-glass systems

GEZE all-glass systems are used on automatic and manual door systems with horizontally moved door leaves. These are elegant and hand-polished stainless steel, single point fixings. The track fixing for wall and ceiling (guide rail) ensures flexible use in all rooms. The height of the single point glass fixings can be adjusted via an elongated hole. The Perlan 140 offers permanent quiet running through two precision ball bearings per roller carriage, track design and large-dimensioned carrier rollers. The inner, sealed ball bearings provide corrosion protection for the slightly damp interior rooms and are therefore also suitable, for example, for bathroom doors. The track made of anodised lightweight metal alloy reduces attrition and also provides increased corrosion protection. The profile has no interfering edges, and all accessory parts run in the rail. The Perlan 140 is therefore ideally suited for mounting in the visible area. The distance between the leaf and the wall can be adjusted using the wall attachment bracket, in this way the door can be set to the individual situation, e.g. for precise mounting of the track if there is any unevenness in the masonry. Adjustable glass floor guides are available for different glass thicknesses.

There is a large number of complete sets for all kinds of different applications. These always contain all the parts required to install the sliding door: track available in different lengths and matching fixing bracket, e.g. for wall fixing, roller carriages, GGS holder, tube buffers and floor guide. Alternatively, the track (6 m long or customized length) and the accessories can be ordered separately. On request the track is also available in a curved version.

GEZE Perlan 140 GGS

GEZE Perlan 140 GGS

Application range

- For single and multi-leaf sliding doors
- For homes and offices
- For room, wardrobe and cupboard doors
- As partitioning and as screening

GEZE PERLAN 140

Technical data

Product features	GEZE Perlan 140 GGS
Door material	Wood, Glass
Leaf weight (max.)	140 kg
Leaf weight (max.) with draw-in damping	80 kg
Corrosion protection class	2

• = YES

Note

The wall recesses must be made accessible by a removable cover. The door leaf must be stopped by a further angle buffer – in addition to the tube buffer. The buffer must be attached at the mid door height!

Mounting with glass leaf

Drawing No. 10417-ep32

Mounting on a 1-leaf sliding door with glass leaf (manual):

- 1 = Wall attachment bracket Perlan 140
- 2 = Tube buffer
- 3 = Hold-open spring
- 4 = Double roller carriage
- 5 = Suspension bolt Perlan 140
- 6 = Set Perlan GGS glass leaf 8-12 mm
- y = Distance end of track to centre of first drilled hole
- n = Quantity
- t = Hole spacing

GEZE Perlan 140 concealed wall bracket

In order to achieve wall installation without on-site cover, installation must be as inconspicuous as possible. For this purpose, GEZE has developed a concealed wall bracket which, when combined with the glass clamping plate or the concealed carrier plate, offers minimum design space for a sliding door. The bracket is available in two different distances: for glass doors which are flush to the wall and for wooden doors with a larger distance to the wall (11 mm). The wooden door variant is also suitable for external applications. As required, the wall can be protected from water stains using sealing rubber. For all variants, GEZE supplies an end cover which can either be glued in place (internal application) or screwed in place (external application). The brackets and distance profiles are available in all track lengths as standard. Also in the standard length 6000 mm or cut to size.

GEZE Perlan 140, concealed wall bracket

Continuous angle (e.g. glass leaf)

Application range

- For wood, plastic, glass and metal leaves up to 140 kg leaf weight
- For wall assembly within the visible area
- Mounting above a door frame or wall tiles

GEZE Perlan 140 spacer profile for concealed wall bracket

GEZE offers further spacer profiles for the concealed wood wall bracket, in order to create even more clearance from the wall. This is particularly necessary if the door is to move in front of a door frame or wall tiling. The spacer profile for the concealed wall bracket is simply screwed on the wall with the wall bracket along the length of the track and also provides an additional 10 or 20 mm clearance.

GEZE Perlan 140 spacer profile for concealed wall bracket

Application range

- For wood, plastic, glass and metal leaves up to 140 kg leaf weight
- For wall assembly within the visible area
- For mounting above a doorframe or wall tiles

GEZE Perlan 140 clip-on cover 100

The clip-on cover 100 with an overall height of only 100 mm enables visually attractive covering of the fittings technology underneath it. It is easily and securely attached using plastic clips, which ensure the cover is securely held regardless of the area of use. This means any tolerances in the aluminium profiles can be evened out. Different distances from the track are possible for glass and wooden doors: in the case of glass doors the clip-on cover is clipped directly into the track, in the case of wooden doors via additional spacer brackets, which are screwed onto the track. With the clip-on cover, GEZE has managed to keep the gap in glass doors visible from underneath as small as possible and yet nevertheless be able to use the same product for thick wooden doors, too.

GEZE Perlan 140 clip-on cover 100

Application range

- For covering the GEZE Perlan 140 and Rollan 40 N / 80 sliding fittings
- For wall and ceiling installation
- For internal application
- For wood, plastic, glass and metal leaves up to 140 kg leaf weight

GEZE Perlan 140 fixed panel

The integrated GEZE Perlan 140 solution with fixed panel creates transparent and comfortable passage doors. The virtually invisible floor and side profiles create a continuous, consistent appearance and augment the generous feeling of space provided by the glass appearance. The installation could not be any easier. The fixed panels are securely held by rubber seals. No gluing is necessary. GEZE Perlan 140 with fixed panel is available as a complete 3 m profile set for independent assembly. All profiles and accessories can also be ordered individually.

GEZE Perlan 140 fixed panel

Application range

- For fully glazed connecting walls
- For all standard door widths
- For fixed panels up to 13 mm ESG or LSG
- Can be combined as a system with virtually all Perlan 140 components

GEZE Perlan 140 Duosync

The roller design fitting for synchronous opening and closing of 2-leaf doors

With the Perlan 140 Duosync, both leaves can be comfortably and conveniently opened and closed with only one move. This is achieved almost silently by precision ball bearings and the toothed belt connection. The complete system has a low overall height and yet is nevertheless stable and virtually maintenance free. If required the system can be concealed using the GEZE clip-on cover system. Duosync is available for both wooden and glass doors.

The accessories set includes 1 x toothed belt 12.5 m, 2 x deflection pulleys, 1 x belt coupler, 1 x adapter for wooden or glass leaves (depending on the set). Perlan 140 Duosync can be combined with any standard Perlan set.

GEZE Perlan 140 Duosync

Application range

- For wood, plastic, glass and metal leaves up to 140 kg leaf weight
- For large opening widths up to 2400 mm, special widths on request
- For leaf widths from 500 mm
- Compatible with virtually all Perlan 140 accessories

GEZE Perlan 140 Telescope

Perlan 140 Telescope is the elegant, space-saving roller sliding door system for large and comfortable passage doors. It also provides reliable protection against the sun's radiation when used together with sliding shutters. High-quality bearings and the self-cleaning track ensure a long life, even for automated operation. The Telescope set can be conveniently pre-assembled on the sliding elements. Perlan 140 Telescope can be combined with Perlan Duosync or Perlan AUT. If automating doors with Perlan AUT, ensure that the outer leaf is always driven. The maximum total leaf weight with Perlan AUT is 80 kg. Perlan 140 Telescope is available as a complete accessory set for a 2-leaf door system. It includes all the parts required for the telescopic function. An extension set is available for each additional leaf. The GEZE installation tool or crimping pliers are required to install the wire cable. The Perlan 140 sliding system must be ordered separately.

GEZE Perlan 140 KS

The sliding fitting for maximum load

Based on the tried and tested Perlan 140 sliding fitting system, Perlan KS is a high-quality, corrosion resistant product variant for leaves up to 140 kg, which fulfils the standard of the highest corrosion protection class to EN 1670. With it, GEZE also offers a quality product for outdoor areas, which can be safely used even in extreme environmental conditions such as sea air or chemical exposure. Just like the standard system Perlan KS can be combined with the complete Perlan accessories range. Perlan KS conforms to all requirements of the relevant standards with regard to static load, fitness for continuous operation, operating force and corrosion resistance.

GEZE Perlan 140 KS

Dwelling house, Santander, Spain (Photo: Pau Esculies)

Application range

- Particularly suitable for automated and manual shading systems for external use
- It can also be combined with Perlan AUT
- For other applications (e.g. in swimming pools), in which increased corrosion protection is required
- All other features according to the Perlan 140 product range

GEZE Perlan 140 wall attachment bracket with weather canopy

The wall attachment bracket with weather canopy is used in external areas for fixing sliding shutters. It carries up to three Perlan 140 tracks, safely and reliably. Replaceable angle brackets are also available in three sizes. All parts are made from corrosion-proof material and are suitable for external use. The maximum load-carrying capacity is 420 kg per metre. This means a maximum leaf weight of 140 kg with three parallel sliding shutters. The tracks can be completely preassembled on the floor with the angle brackets, this largely avoids strenuous overhead work. The system is then simply hung in the previously installed wall profile and is secured with screws. The wall bracket with weather canopy is also available completely assembled on request. All profiles and accessories can also be purchased individually as stock items. Apart from the anodised aluminium and stainless steel like surfaces, on request the cover profile can also be produced in all common RAL colours.

GEZE Perlan 140 wall attachment bracket with weather canopy

GEZE Perlan 140 wall attachment bracket with weather canopy

Application range

- For sliding shutters on the exterior
- For 1-3 Perlan 140 tracks
- For 1-3 parallel sliding elements with up to 140 kg leaf weight
- Suitable as water protection for Perlan AUT

GEZE Perlan 140 bottom guides for sliding shutters

Individual guide variants can be implemented for virtually any application by means of a system consisting of adjustable slider without play and angle brackets in three sizes. With the GEZE M profile, leaves can pass parallel to each other and yet still be safely guided without rattling in their own plane. Their narrow overall width is a particular advantage of the GEZE guides for sliding shutters.

GEZE Perlan 140 bottom guides for sliding shutters

Application range

- For sliding shutters on the exterior
- As a play-free floor guide, is also suitable for indoor use
- For individual guiding, can be adapted to virtually any building situation

GEZE Perlan AUT 2

The Perlan AUT 2 set allows automation of the manual sliding fitting system Perlan 140 for leaf weights up to 120 kg. A simple and low-cost solution which supports users with the operation of shutter systems and also offers numerous further application options. The Perlan AUT/2 guarantees ease of opening and closing on wall-in wardrobes, on very large leaves and in spots which are difficult to access. It helps to avoid accidents where window shutters are installed at a great height. A synchronous, automated variant can be realised via an additional driver.

GEZE Perlan AUT 2

Application range

- For sliding shutters on the exterior
- For leaf weights up to 120 kg
- For single- or multi-leaf systems in combination with a further toothed belt driver or Perlan telescope
- Suitable for connection to a building system using potential-free actuators

Technical data

GEZE PERLAN AUT 2

Note

The wall recesses must be made accessible by a removable cover. The door leaf must be stopped by a further angle buffer – in addition to the tube buffer. The buffer must be attached at the mid door height!

Standard installation

Drawing No. 10421-ep10

Mounting on a 1-leaf sliding door with wooden leaf and carrier plate:

- 1 = End cap (optional)
- 2 = Wall attachment bracket Perlan 140
- 3 = Double roller carriage
- 4 = Carrier plate
- 5 = Drive Perlan AUT 2
- 6 = Tube buffer
- 7 = Floor guide
- 8 = Push button with dead man's control
- L = Track length
- y = Distance end of track to centre of first drilled hole
- t = Hole spacing
- FB = Leaf width
- FH = Leaf height

Can be fixed directly or with a plate on the ceiling or a bracket on the wall:

Direct ceiling mounting
FH = Leaf height
BRH = Overall height

Wall mounting with angle
FH = Leaf height
GH = Total height

Ceiling installation with plate
FH = Leaf height
BRH = Overall height
1 = Ceiling attachment angle Perlan 140

System components:

- 1 = Return pulley
- 2 = Drive
- 3 = Toothed belt
- 4 = Driver with belt coupler
- 5 = Control /push button

Standard installation on glass leaves

Drawing No. 10421-ep14

Mounting on a 1-leaf sliding door with glass leaf and glass clamping plate:

- 1 = Wall attachment bracket Perlan 140
- 2 = Double roller carriage
- 3 = Glass adapter
- 4 = Drive Perlan AUT
- 5 = End cap (optional)
- 6 = Tube buffer
- 7 = Glass clamping plate
- 8 = Push button with dead man's control

- L = Track length
- y = Distance end of track to centre of first drilled hole
- t = Hole spacing
- FB = Leaf width
- FH = Leaf height
- n = Quantity

Can be fixed directly or with a plate on the ceiling or a bracket on the wall:

Direct ceiling mounting
SH = Panel height
GH = Total height
GLS = Thickness of glass

Wall mounting with angle

Ceiling installation with plate

Wall installation on the exterior

GEZE Perlan AUT-NT

The simple type of sliding door automation

GEZE Perlan AUT-NT is a simple, elegant and yet cost-effective solution for the automation of lightweight sliding doors for interior use – naturally with all the convenient functions of a full automatic door. The Push&Go function, which automatically starts the drive if the door leaf is lightly pushed, offers convenient operation. The opening speed of up to 0.3 m/s maximum and the gentle start-up and braking of the drive provide increased convenience. Various types of operating enable adaptation to individual user's wishes. Perlan AUT-NT moves the door almost silently, as it produces hardly any disruptive running noises. The drive fulfils all requirements for low energy operation to DIN 18650, as the door moves with reduced force. Consequently, there is no need for safeguarding with additional safety sensors. If there is a power failure, the door can be opened by hand and can therefore also be safely accessed in an emergency. Perlan AUT-NT is suitable for wooden and glass doors and can be used with the standard accessories of the Perlan 140 roller sliding fitting system in virtually any installation system and on any door leaf. Perlan AUT-NT can be adapted to all leaf widths from 500 to 3000 mm, either as a standard set or flexibly assembled on the construction site.

GEZE Perlan AUT-NT

Application range

- Low energy sliding door drive in accordance with DIN 18650
- For the automation of lightweight internal doors up to 80 kg
- For all single- and multiple-leaf sliding doors
- Maximum settable speed up to 0.3 m/s
- Particularly well suited for doors in living and office spaces

Technical data

GEZE Levolan 60

Sophisticated universal fitting for all types of leaves

With the compact Levolan 60 sliding fitting system, GEZE has created a new sophisticated solution to design easy-to-use, manual sliding doors for interior use. Small fitting dimensions and the linear design with a slim, 50 mm high track suit every installation situation. The sophisticated fitting technology can be used for door leaf weights of up to 60 kg. The integration of the complete fitting parts in the track optimises the overall design and makes fast and straightforward commissioning possible. The fast and straightforward installation of fittings from the front using only a single installation tool is a particular advantage. The integrated GEZE Levolan SoftStop draw-in damping integrated in the track, on one side or on both sides, gives additional safety and convenience: The sliding door leaves are guided gently and safely into the end position, with no more banging into the frame or buffer. The risk of fingers being trapped is almost totally excluded. All visible parts are available in the finishes silver-coloured EV1, stainless steel colour or RAL.

GEZE Levolan 60

Application range

- For glass elements ESG (toughened safety glass) 8, 10 and 12 mm as well as laminated safety glass up to 10 mm (with additional LSG kit) and wooden leaves up to a weight of 60 kg
- For all single- and multiple-leaf sliding doors
- With or without fixed panel
- For wall, ceiling and glass attachment

Door pull handle, configured			Stainless steel	127616

GEZE Levolan 60 SoftStop

Strong design – gently damped

With the GEZE Levolan 60 SoftStop, the variant with draw-in damping, sliding elements up to 60 kg can be realised without additional leaf processing. Sliding doors made of glass, wood, metal and plastic can be realised without any effort. The height adjustment of the door leaf via an eccentric fitting on the roller carriage permits the fast and optimum adaptation of the sliding door to all structural situations. The smooth-running rollers and roller carriages guarantee maximum sliding comfort and a long life span. The optional GEZE Levolan 60 draw-in damping guarantees additional safety and comfort. A damping feature gently brakes the closing movement of the door about 10 cm before the end of the guide rail. The door leaves are then automatically guided gently and safely into the end position, With no more banging into the frame or buffer. The risk of fingers being trapped is practically excluded. The GEZE Levolan 60 SoftStop can be retro-fitted and adapts the sliding door to changing user requirements e.g. for children or the elderly. Draw-in damping on both sides is available for Levolan 60 SoftStop even for slim door leaf widths from 770 mm.

GEZE Levolan 60 SoftStop

Application range

- For glass elements ESG (toughened safety glass) 8, 10 and 12 mm as well as laminated safety glass up to 10 mm (with additional LSG kit) and wooden leaves up to a weight of 60 kg
- For all single- and multiple-leaf sliding doors
- Damped on one or both sides
- Quiet running makes it particularly well suited for doors in living and office spaces

GEZE Levolan 60 SoftStop - Order information

Description	Leaf width from - to	ID.No.
Levolan 60 SoftStop set, damped on one side, up to 60 kg for draw-in damping on the left, comprising: 1 x damping unit, 1 x mount for roller carriage, 1 x actuator, can also be retro-fitted - minimum leaf width 570 mm	570 mm 1240 mm	146370
Levolan 60 SoftStop set, damped on one side, up to 60 kg for draw-in damping on the right, comprising: 1 x damping unit, 1 x mount for roller carriage, 1 x actuator, can also be retro-fitted - minimum leaf width 570 mm	570 mm 1240 mm	146401
Levolan 60 SoftStopDuo, damped on both sides, up to 60 kg for draw-in damping on the left & right, comprising: 1 x double damping unit, 2 x mount for roller carriage, 2 x actuator, can also be retro-fitted - minimum leaf width 770 mm	770 mm 1240 mm	146402

GEZE Levolan 120

The design fitting for all-glass and wooden sliding doors

GEZE Levolan 120 supports double the weight as the proven Levolan 60 with the same look. With its compact dimensions it provides a virtually invisible clamp fitting for interior manual sliding doors with leaves up to 120 kg. The fittings are completely integrated into the only 50 mm high track. With its streamlined design, the modular system suits every installation situation. Only one track is needed for ceiling and wall installation. The optional Levolan SoftStop draw-in damping guides the sliding door leaves gently and safely into the final position without the danger of compressing fingers or impact against the frame. The integrated derailing protection device is automatically activated when setting the height of the door leaf, offering additional security. Installing the fitting is quick and easy from the front using the Levolan Smart fix assembly system. All visible components are available with the surface finishes silver EV1, stainless steel optic or in RAL colours.

GEZE Levolan 120

Area of application

- For 10 and 12 mm toughened safety glass elements and for 10.76 and 12.76 mm laminated safety glass elements (with additional LSG kit) and wooden leaves up to a weight of 120 kg
- For all single- and multiple-leaf sliding doors
- With or without fixed panel
- For wall, ceiling and glass attachment

Door pull handle, configured			Stainless steel	127616

GEZE Levolan 120 SoftStop

Strong design - gently damped

Glass and wooden sliding doors up to 120 kg can be installed without additional work on the leaves using the GEZE Levolan 120 SoftStop, the model with draw-in damping. The door leaf's height adjustment facility via the roller carriage allows the sliding door to be adapted optimally to the structural circumstances. The smooth-running rollers and roller bearings ensure maximum sliding ease and a long operating life. The optional GEZE Levolan 120 draw-in damping guarantees enhanced safety and ease. The draw-in damping gently brakes the door as it closes approx. 10 cm before the end of the closing sequence. The door leaves are then automatically guided virtually silently into their final position. Impact against the frame or buffer is avoided. Any risk of fingers being compressed is practically eliminated. The GEZE Levolan 120 SoftStop can be retro-fitted to adapt the sliding door to changing user needs, e.g. for children or the elderly.

GEZE Levolan 120 SoftStop

Area of application

- For 10 and 12 mm toughened safety glass elements and for 10.76 and 12.76 mm laminated safety glass elements (with additional LSG kit) and wooden leaves up to a weight of 120 kg
- For all single- and multiple-leaf sliding doors
- Damping on one or both sides
- Quiet running makes it particularly well suited for doors in living and office spaces

Product information

Product information for sliding door systems

In accordance with the manufacturer's liability for their products, as defined in the "Product Liability Law" (§ 4 ProdHG), the following information about sliding door systems must be noted and observed. Non-observance releases the manufacturer from its statutory liability.

Product information and intended use

Within the context of this definition, sliding fittings are fittings for sliding door leaves and other sliding elements (referred to in the following as "objects") which are not normally moved faster than walking pace. Sliding fittings are used on plumb, vertically installed door leaves made of wood, plastic, glass, aluminium or steel or appropriate combinations of these materials. A floor guide is provided on the bottom horizontal edge of the door leaf. Special versions of products must be specified for use in damp rooms, for doors directly exposed to the elements or cross-winds, installed near the sea or for use in aggressive, corrosive environments. Intended use includes in particular correct installation. The fitting must have sufficient strength at all these points. The installation must not have any negative effects on or alter the function of the fitting. Buffers (door stops) must be used to limit the range of movement.

Misuse

Misuse, i.e. abnormal use or use not as intended, of sliding fittings exists in particular if:

- The fittings are used with a higher load than the maximum capacity given in the catalogue and other product documents,
- Fittings are incorrectly installed or are inadequately fastened,
- Ambient temperatures are too high or too low,
- Particularly aggressive media can affect the fittings,
- Fittings are subject to inordinately large impact and falling loads and stresses,
- The position of the track excessively deviates from the horizontal,
- Foreign bodies can penetrate the track,
- The track rollers are operated too fast,
- Alterations are made which have not been agreed with the manufacturer,
- Obstructions are placed in the opening area or between the leaves or the object and therefore prevent intended use,
- Additional loads act on door leaves or objects,
- Reaching between the door leaves and door frame while sliding shut or closing the door or a person or parts of the body are in this area while the door is being closed.

Product performance

If the product performance is not explicitly specified in our catalogues, brochures, specifications and other product instructions, the requirements for our fittings must be agreed with us. Our regulations concerning fitting configurations are binding.

Product maintenance

Safety-relevant fittings must be regularly checked for secure fit and for wear. Re-tighten or replace fixing screws depending on the requirements. In addition, the following maintenance work must be carried out at least once a year:

- Check the function of all moving parts,
- Only use cleaning agents which do not have any negative effect on the fittings' corrosion protection,
- Defective fittings are to be replaced,
- Fitting adjustment work and replacements must be carried out by suitably qualified personnel/firm.

Duty to inform and instruct

The following material is available to the planners, specialist trade firms, installation engineers, constructors and users as fulfilment of the duty to inform and instruct:

- Catalogues, brochures
- Tender texts, tender documents
- Mounting and installation instructions, installation drawings

To ensure correct use, proper function and maintenance of the fittings

- Architects and planners are required to request, note and follow the necessary product information,
- Specialist trade firms are required to note and follow the product information and notes in the price lists and in particular to request all necessary instructions and to pass them on to the installation engineers,
- Installation engineers are required to note and follow all product information and to pass it on to their client and the user.

Perlan AUT fundamental safety aspects

Fundamental dangers

Dangerous electric voltages: The Perlan AUT is operated with dangerous electrical voltage. Authorised persons only, using the tools intended for this purpose, may carry out installation, dismantling and connection work on control switches and drives. Before starting any work, the power supply must be switched off and secured against being switched on again without authorisation.

Power connections

The Perlan AUT may only be connected in accordance with the data given in the technical data sheets.
All power connections must be able to be switched off on site.

Safety precautions

- Location of the installation instructions: The installation instructions must be kept in a safe place by the person/company responsible for installation or by maintenance personnel. They are responsible for correct installation and maintenance of the system.
- Removal of safety devices: Do not remove or disable any of the safety devices. An exception exists in the case of the authorised service personnel. Following a service, normal operation may not be resumed until all safety devices have been attached and checked.

Spare parts to be used

Original GEZE spare parts only may be used for maintenance and repair purposes.

Classification according to EN 1527:2013

Category of use (1st number)

No category of use defined.

Duration of operability (2nd number)

- Class 1 = 5,000 cycles
- Class 2 = 10,000 cycles
- Class 3 = 25,000 cycles
- Class 4 = 50,000 cycles
- Class 5 = 75,000 cycles
- Class 6 = 100,000 cycles

Door weight (3rd number)

- Class 1 = Door weight up to 50 kg
- Class 2 = Door weight from 51 kg to 100 kg
- Class 3 = Door weight from 101 kg to 330 kg
- Class 4 = Door weight more than 330 kg

Fire resistance (4th number)

No class has been defined for these products.

Safety (5th number)

All construction systems for sliding doors and folding doors complying with this standard must be classified as class 1 regarding safety.

Corrosion behaviour (6th number)

The products are divided into classes 1 - 4 according to the 5 classes specified in EN 1670. Class 0 is reserved for untested products.

Protection (7th number)

No class defined for protection.

Type of door (8th number)

- Class 1 = sliding door
- Class 2 = folding door (2-leaf)
- Class 3 = multi-leaf folding door

Initial friction (9th number)

There are three classes:

Door weight	up to 50 kg	51-100 kg	101-330 kg	> 330 kg
Class 1	50 N	80 N	100 N	5 % of door weight
Class 2	40 N	60 N	5 % of door weight	4 % of door weight
Class 3	30 N	40 N	4 % of door weight	3 % of door weight

[illegible]

POTENTIAL APPLICATIONS OF GEZE PRODUCTS

Door technology

The functionality, superior performance and reliability of GEZE door closers are impressive. A common design across the range, the ability to use them on all common door leaf widths and weights, and the fact that they can be individually adjusted makes their selection simple. They are continually being improved and enhanced with up-to-date features. For example, the requirements of fire protection and accessibility are fulfilled with a door closer system.

Automatic door systems

GEZE automatic door systems open up a huge variety of options in door design. The latest, innovative high-performance drive technology, safety, ease of accessibility and first class universal drive design set them apart. GEZE offers complete solutions for individual requirements. A dedicated division is responsible for the development and construction of individual special designs.

Smoke and heat extraction and window technology

GEZE smoke and heat extraction systems and ventilation technology provide complete systems solutions combining the many requirements of different types of windows. We supply a full range from energy efficient drive systems to natural ventilation and complete solutions for supplying and extracting air, also as certified SHEVs.

Safety technology

GEZE safety technology sets the standards where preventative fire protection, access control and anti-theft security in emergency exits are concerned. For each of these objectives GEZE offers tailored solutions, which combine the individual safety requirements in one intelligent system and close doors and windows in case of danger in a coordinated manner.

Building systems

In GEZE's Building Management System GEZE door, window and safety products can be integrated in to the security and control systems of the building. A central control and visualisation system monitors various automation components in the building and offers security through many different networking capabilities.

Glass systems

GEZE glass systems stand for open and transparent interior design. They can either blend discreetly into the architecture of the building or stand out as an accentuated feature. GEZE offers a wide variety of technologies for functional, reliable and aesthetic sliding wall or sliding door systems providing security with lots of design scope.
